DEEP IN YOUR JOURNEY

Congratulations! You are well on your way to a fully transformed organization.

Ideally, we all want to get to the last stage: Integrated. That's when digital has transformed the DNA of your organization. It is no longer a project. It's a mindset. It's how you approach everything.

You're standing strong on the scale to digital maturity.

You've got leadership on your side. You've got a customer-centric digital transformation framework with teams collaborating across departments on intentional and strategic projects. Business strategy and digital transformation are aligned.

STAGE 6

Integrated

Your **NEXT STEP** is moving past alignment and into fully integrating digital transformation into your normal business operations.

Instead of viewing transformation as a series of projects to be managed and executed, it's time to look at creating a team that is a part of your leadership structure, your strategic planning and your day-to-day activities.

And that leads to the final two stages of digital transformation: **SYSTEMATIC** and **INTEGRATED**.

SYSTEMATIC

To ensure transformation is **DEEPLY INGRAINED** in your organization, start by developing a digital transformation team to guide your operations, in addition to your strategy.

This team should be responsible for delving deeper into customer journeys and technology to further blend digital and traditional strategies. They should reconceive traditional sales funnels into more sophisticated, dynamic and less-linear flows.

Who makes up this team? Ideally, it's a hybrid of external experts and internal leaders who can act as change agents and innovators. Leadership should include chief digital experience executives who are empowered to identify, research and act on digital trends and innovations.

ACHIEVING LASTING CHANGE

Your digital transformation team should touch each part of your organization. Transformation cannot happen when people and departments are left behind. Digital transformation needs to become a part of your very culture. It's way of thinking and acting on a day-to-day basis — not just implementing the building blocks of your transformation but also **CONTINUALLY ASSESSING** your organization's needs and evolving your goals, strategy and processes under the overarching direction of your digital transformation team.

In this way, digital transformation achieves real and **LASTING RESULTS**. Your legacy processes and workflows get revamped to use digital tools to their fullest potential. Redundancies get eliminated. Efficiencies achieved.

Your technology platforms don't get upgraded and then forgotten. You finances include constant tech research, upgrades and enhancements.

Under this team, you're able to create new infrastructure. To shape everything from roles to processes to systems to solidify your transformation into your culture. To ensure you can continue building on it to better serve customers and **STAY AHEAD** of your competition.

Once you achieve the systematic stage of digital transformation, you are ready to integrate and start reaping the rewards.

Earnings growth for digital leaders is **1.8 TIMES HIGHER** than their less mature counterparts.

INTEGRATED

You've reached the **FINAL STAGE**. Digital has now transformed the DNA of your organization.

Because transformation isn't just about sales or production, no part of your organization is untouched. You've answered questions and developed a digital strategy

How you serve customers

How you measure success

How you hire

Who you hire

How you work

Where you work

Your entire organization **HAS EMBRACED** a culture of transformation by adopting an agile mindset.

This mindset helps deliver radical new approaches to old problems. But sometimes the deep work needed for innovation gets left behind in the sprints. **MAKING ROOM FOR INNOVATION** — even if that means upstaging your own products — is the sure way to stay ahead of the competition.

THE BENEFITS OF A SUCCESSFUL DIGITAL TRANSFORMATION

In this last stage of digital transformation, your leadership begins to see the fruits of digital transformation and truly understand that change is constant, so transformation is continual. With digital transformation and business intelligence as integral parts of your business, you're able to identify market trends, new opportunities and potential challenges, and then act on them.

Ultimately, you're positioned to continue adapting to the ever-changing business world, in a far less arduous and time-consuming fashion than you were before you embarked on this journey. You're able to greatly improve the customer experience, retaining current customers and gaining market share. Your competitors have taken notice, but digital transformation has you solidly in the lead and with the knowledge and ability to stay there.
